LOUVERS

The shutter louvers are the wooden slats that go across your shutters.

The width of each slat is the louver size. They tend to range from around 2.5 inches wide up to a solid 4.5 inch wide slat.

The decision of louver sizes is based on privacy, light, and outlook views.

Full height shutters ►►►

Full height shutters are the most popular style of plantation shutters with a choice of slat widths, control options, opening possibilities, fittings and finishes. Optional mid-rail to match in with your window beams. Whatever your style of window, doorway or partition we will be able to advise you on the best shutter options and help you arrive at the right choice.

▶▶▶ Full height shutters

Tier on tier shutters ▶▶▶

Tier on tier shutters essentially have two sets of panels, upper and lower, that operate independently from one another.

This allows you to keep the lower tier panels closed for privacy and keep the top tier panels open for full light-entry.

If you have furniture or maybe a kitchen faucet blocking the bottom of the window opening, this style still gives you freedom to operate the upper section of your shutters freely.

Alternately, you can keep the bottom tier panels open if you need access to your windowsill, or perhaps an air conditioning unit in the window, and keep the top tier closed as needed.

This style is also great for windows that face a busy street or directly point toward a neighbor's house.

Cafe shutters

Cafe Shutters cover only a portion of a window.

They are perfect for rooms where privacy is important but you don't want to completely shut the natural light out.

The benefits of cafe shutters :

Enhancing Natural Light but Keeping Privacy:

Cafe shutters are unique in that they enhance natural light but keep privacy levels as high or low as you need. They can be made with a tilt bar to adjust the louvers, which allows you to get just the right amount of light and privacy for your needs.

Humidity Resistance:

They are highly versatile and can be used in dining rooms, kitchens, living rooms, bathrooms, and more. They are custom-made, so you can find a perfect fit for any specialty shape window.

Low Maintenance and Easy Cleaning:

Cafe shutters are extremely easy to clean and maintain. They can simply be quickly wiped down with a damp cloth every few weeks for an effortless refresh, so you don't have to worry about deep cleaning or scrubbing.

Tracked/Bi-folding shutters ►►►

Tracked shutters are a type of shutter that is installed on a track system. This allows the shutters to slide open and closed, providing flexibility in terms of light control and privacy.

Why Fit Tracking Shutters in Your Home?

1. Seamless Integration with Doors

Tracked internal shutters are designed to seamlessly integrate with your bifold or sliding doors, providing a clean and cohesive look. They can be custom-made to complement your interior design and either slide along a track or concertina in front of your doors. When fully opened, the shutters can stack neatly against the wall on whichever side of the door you'd prefer, allowing for maximum visibility and floor space.

2. They're Highly Versatile

Tracking shutters can be used as much more than window coverings; you can also use them as a partition or room divider, or as good quality light folding doors.

3. Increased Internal Comfort

When you have a suitable window covering, you can regulate the temperature in your home by keeping it cool in the summer and warm in the winter. By tilting the tracked internal shutters at different times of the day, you can ensure your home is getting the right amount of sunlight. The insulation provided by the shutters can also reduce the need for heating and cooling systems, saving you money on your energy bills. They Offer High Levels of Privacy

Panel shutters ►►►

Panel shutters are built with two solid panels, Their design offers extra security and some insulating properties. Panel shutters come in raised panel, flat panel and recessed panel styles.

THE KEY BENEFITS OF SOLID PANEL SHUTTERS:

ENHANCED CURB APPEAL

One of the most noticeable benefits of installing shutters is their boost to your home's curb appeal. Attractive, well-fitted shutters frame your windows beautifully and add visual interest to your home's exterior. This can increase your home's perceived value.

Ideal for period properties

Traditional, classic and timeless they are a great consideration and have the same quality finish as all of our shutter ranges.

Premium sustainable hardwood panels

Our Solid Shutter Panels are made from a stable and quick growing timber, and provide a classic and simple look.

Like our other shutter ranges there is also the custom colour option available to you too.

Maximum Room Darkening

The Simple design of a solid shutter panel means that you get maximum coverage on your window with very few areas for light to bleed through.

Adds insulation

With the ever rising energy bills, insulation is more important than ever and it's not uncommon for period properties to have single-glazed windows or just be a little draftier.

Panel shutters ►►►

Bay shutters

Enhanced security: robust shutters place an additional barrier between the outdoors and the interior of your home, enhancing security at an affordable price.

Cooler summers: shutters manufactured from the highest quality materials can also help keep interior spaces cooler in the summer, with welcome protection from direct sunlight.

Enhanced privacy: Shutters can be configured in a way that completely obscures the view of those outdoors, bringing welcome privacy and seclusion to your indoor spaces.

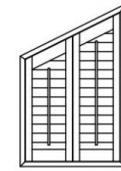

More natural light: When shutters are fully opened, they allow natural light to bathe the interior space with almost no obstruction whatsoever.

Thermal efficiency: The highest-quality bay window shutters can significantly boost the thermal efficiency of the space within, creating a more comfortable ambience and reducing energy consumption.

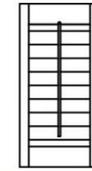

Shaped shutters ►►►

Shaped shutters are a popular choice for homeowners with windows of unconventional shapes. They are made to fit just about any shape, window, room or area you can think of. Shaped shutters transform awkward spaces into grand architectural focal points. Shaped shutters: Perfect for circular, arched or angled windows.

Method of measurement

一、 Measurement for normal recess:

Measuring way:get the following six numbers with your tapes

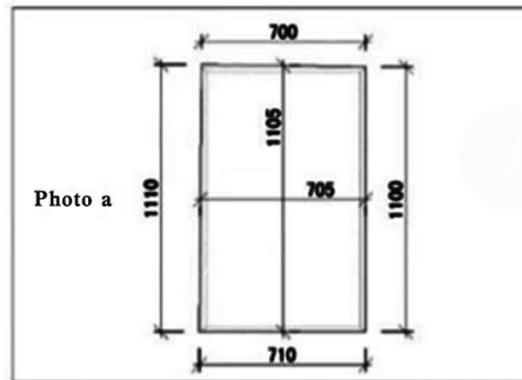

a. Inside mounting、 Measure standard way:

width= tell us the **smallest** one among upper width, middle and lower width

height= tell us the **smallest** one among left middle and right height

For example(photo a):

upper width=700 middle width=705
lower width=710 left height=1100
middle height=1105 right height=1100
so, width=700mm
height=1100mm

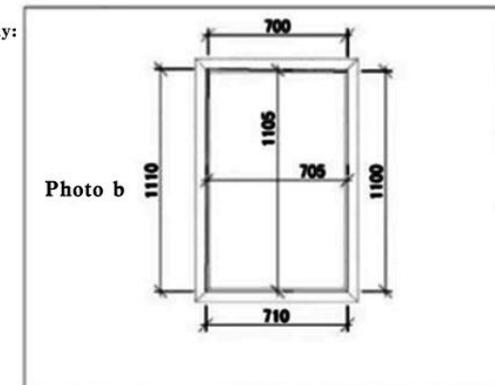

b. Outside mounting、 Measure standard way:

width= tell us the **biggest** one among upper width, middle and lower width

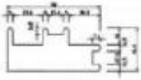

height= tell us the **biggest** one among left middle and right height

For example(photo b):

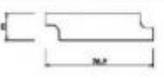

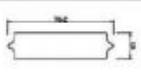

upper width=700 middle width=705
lower width=710 left height=1100
middle height=1105 right height=1100
so, width=710mm
height=1110mm
