Shutters Presentation

A wood shutter is typically a kind of window treatment that installs directly onto your window. wood shutter is more oftenly used interior. It usually consists of a frame that attaches to the window and horizontal slats — also known as louvers — that you can tilt to let the light in as you want. It provides both aesthetic and functional benefits.

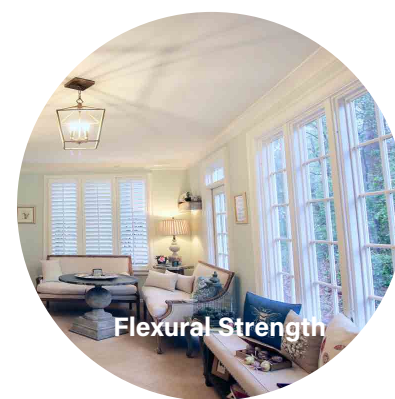

High quality and less defects

The whole production is exquisite and unique

Louvers have great Flexural strength

A wood shutter is consisted of real, natural wood like durable basswood or Paulownia wood (also known as Phoenix Wood). It can be painted or stained. You can get painted wood shutters if you prefer neutral shades like white, cream, beige, or black. If you prefer the natural look of wood, you get to choose from lovely stains of paulownia wood, also can be stained to be colors of teak, black walnut, and cherry.

FUNCTION

only open louvers

Bi-Fold shutters are often used for entrance sliding doors, bifold doors, and they look great when used as room dividers

half open

Open the shutters and let the cool morning breeze accompany a little light

fully open

When folding all the panels to one side, enjoy the scenery. Folding shutters provide clear and unobstructed views when folded

Protect personal privacy

Adjusting the angle of the louver can block the sight from above or below. If you want to block the gaze from above, you should push the convex surface of the leaf to the indoor side, if you want to block the gaze from below, The opposite is true.

Easy to clean

The shutters are very easy to clean, you only need a towel to wipe gently.

We have abundant of colors available ,
amongst all, we picked 15 colors that are

Choose Your Shutter Types

Wood Shutters can add warmth, elegance, and natural beauty to a room, and can also provide privacy, energy efficiency, and sound insulation. Wood also adds a luxurious feel to homes.

Full Height Shutters

Adjusting the angle of the louver can block the sight from above or below. If you want to block the gaze from above, you should rush the convex surface of the leaf to the indoor side, if you want to block the gaze from above, The opposite is true.

Insulation: Shutters can help keep your home warm in the winter and cool in the summer, which can reduce your energy bills and environmental impact.

Light control: Shutters can block out unwanted light and provide privacy.

Noise reduction: Full window coverage can help reduce outside noise.

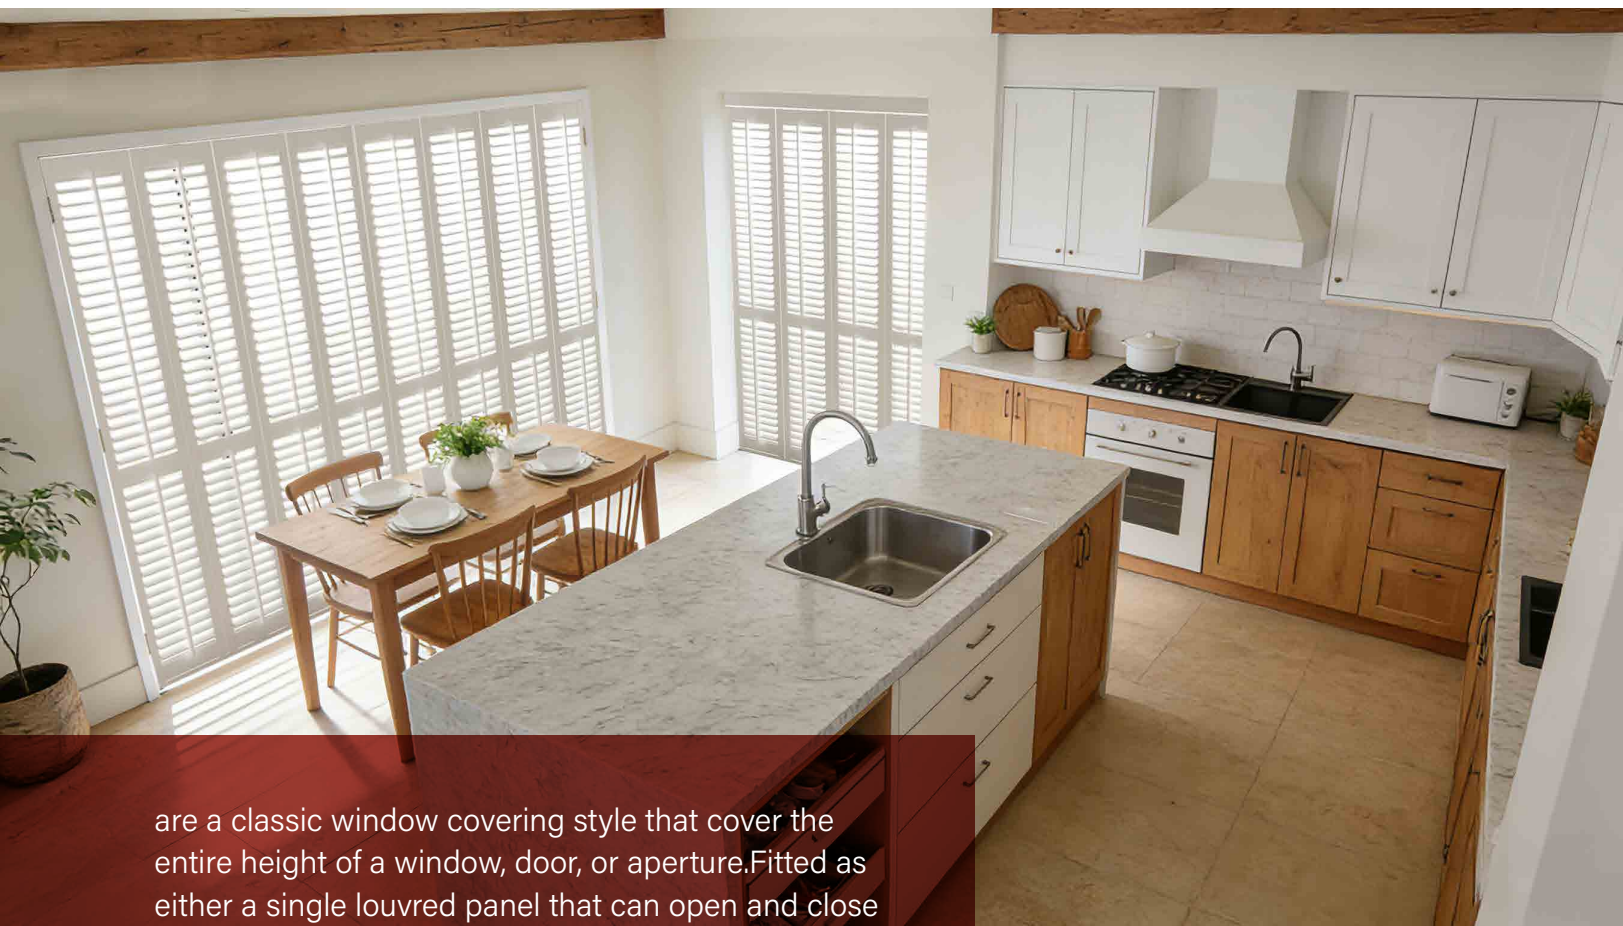

Temperature control: You can keep shutters closed to keep out heat in the summer, while adjusting the louvers to allow for airflow.- Full height shutters are suited to windows of any size or shape and are also perfect for shutters on doors.

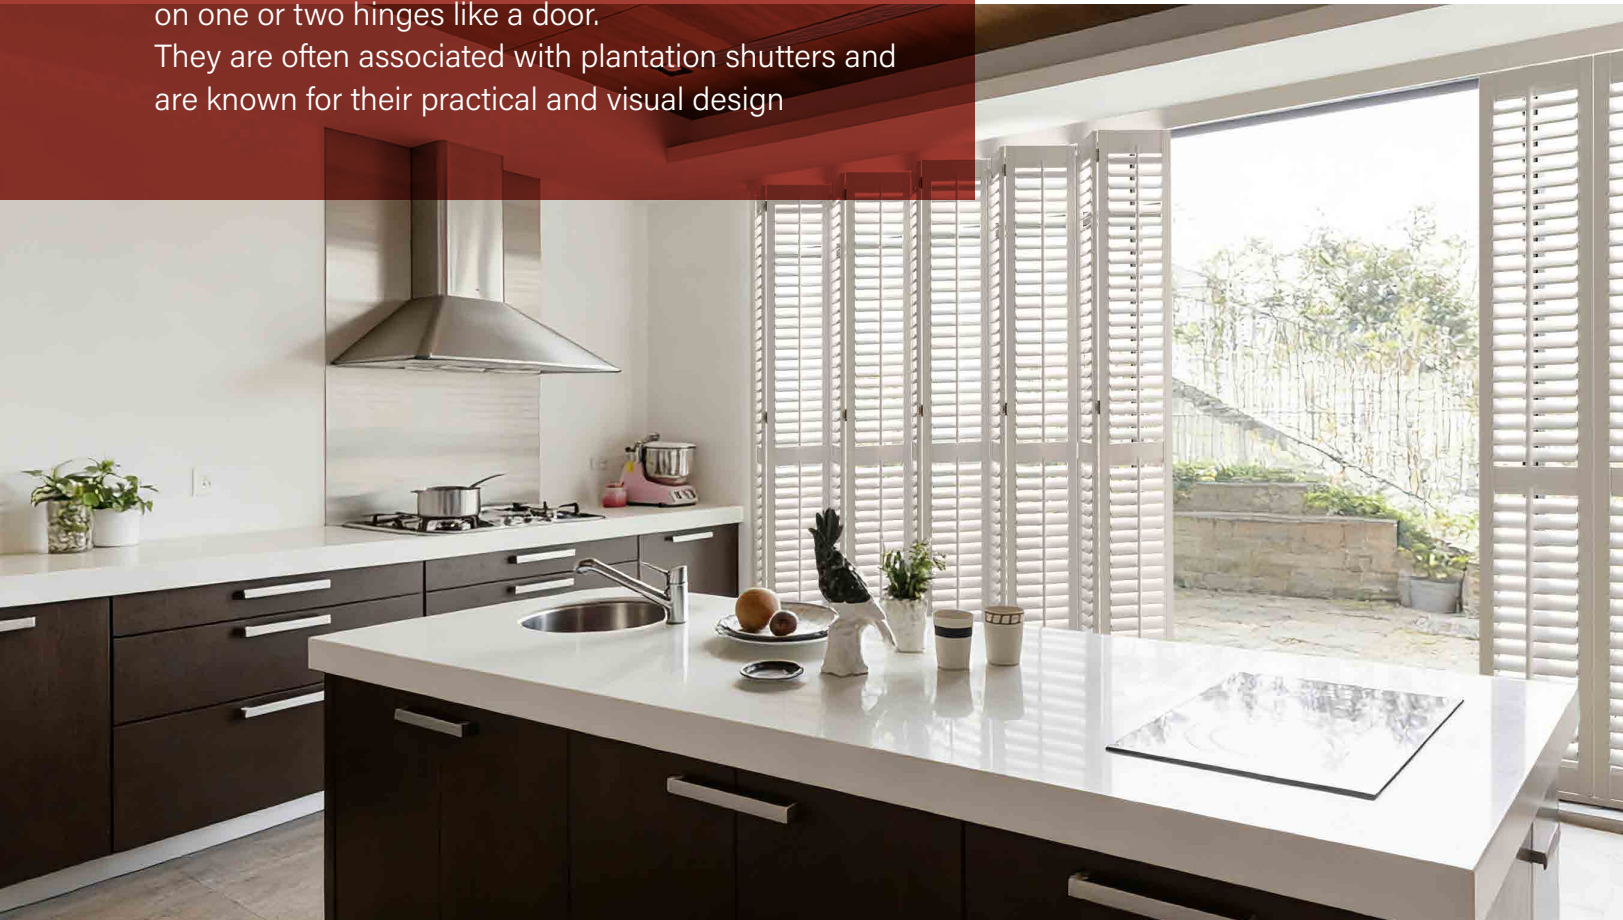

Easy to clean: Shutters are often coated to protect them, so they usually only need to be dusted and wiped down.

Security: Shutters can provide an extra layer of security by making it harder for potential intruders to see inside.

are a classic window covering style that cover the entire height of a window, door, or aperture. Fitted as either a single louvred panel that can open and close on one or two hinges like a door. They are often associated with plantation shutters and are known for their practical and visual design

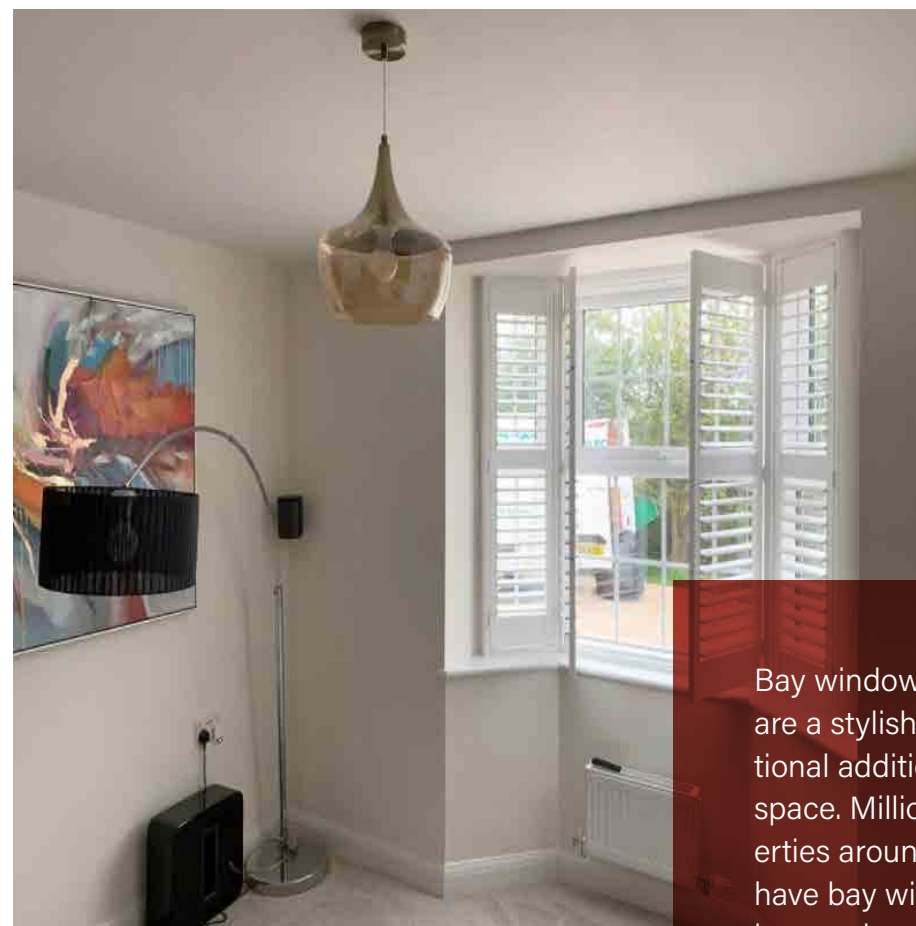

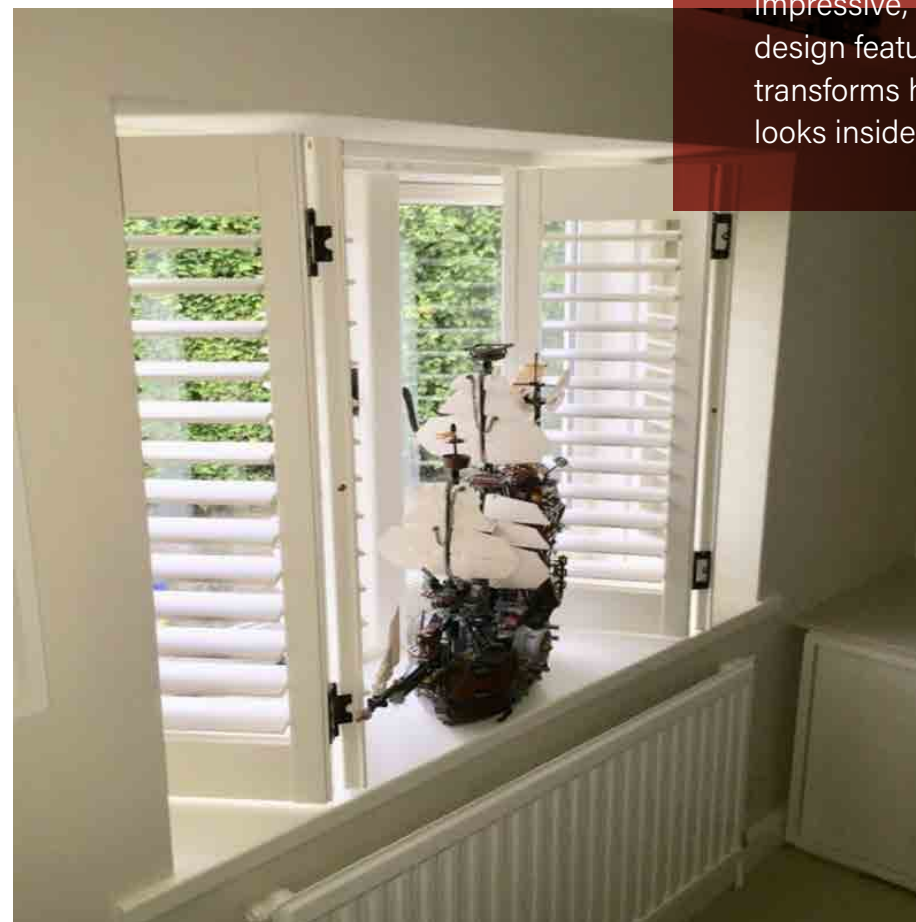

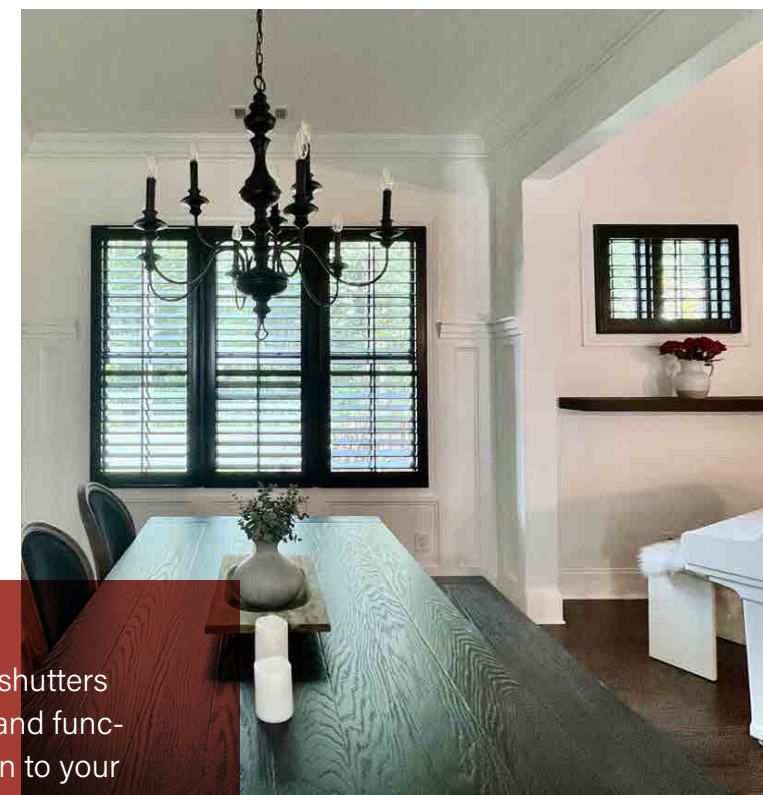

Tier on Tier

shutters (also known as double hung shutters) are designed to allow you to open the top section of shutter panels independently from the lower section of shutter panels. Tier on tier style shutters are a popular choice because they combine some of the benefits of both full height and café style shutters. With split tiers of shutter panels that operate independently, you can keep your window fully or partially covered with flexible control over privacy and lighting.

Bay Window Shutters

Bay window shutters are a stylish and functional addition to your space. Millions of properties around the world have bay windows. An impressive, visible design feature that transforms how a home looks inside and out.

Café Shutters

cafe-style shutters are a type of window shutter that covers only the lower section of the window leaving the top half of the window exposed.

Cafe Shutters cover only a portion of a window
They are perfect for rooms where privacy is important but you don't want to completely shut the natural light out.

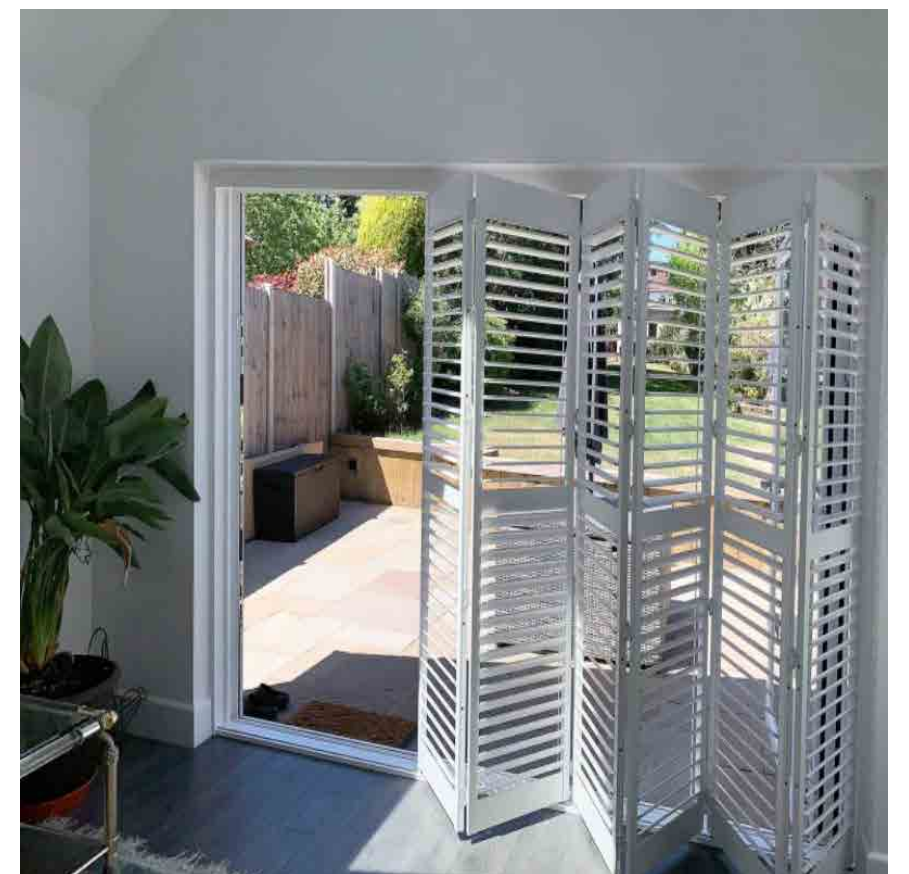

Tracked shutter

Tracked shutters are a type of shutter that is installed on a track system. This allows the shutters to slide open and closed, providing flexibility in terms of light control and privacy.

Panel shutters

Panel shutters are built with two solid panels. Their design offers extra security and some insulating properties. Panel shutters come in raised panel, flat panel and recessed panel styles.

THE KEY BENEFITS OF SOLID PANEL SHUTTERS

- ENHANCED CURB APPEAL
- Ideal for period properties
- Premium sustainable hardwood panels
- Maximum Room Darkening
- Adds insulation
- Offer complete privacy

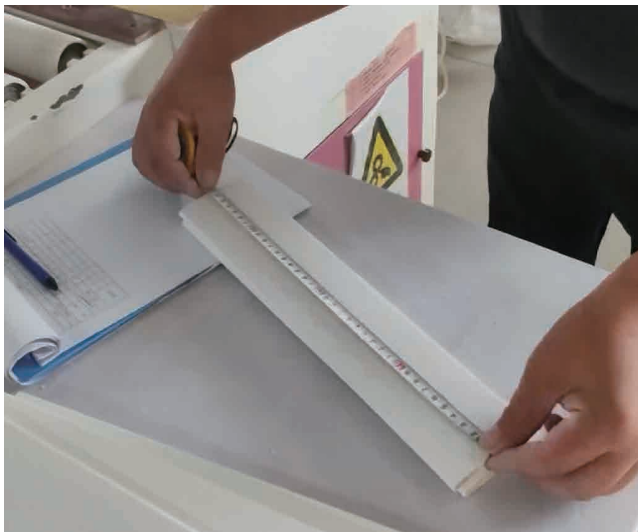

Shaped shutters

Shaped shutters are a popular choice for homeowners with windows of unconventional shapes. They are made to fit just about any shape, window, room or area you can think of. Shaped shutters transform awkward spaces into grand architectural focal points. Shaped shutters: Perfect for circular, arched or angled windows.

Specialty

High-precision machinery delivers precise dimensions, custom-made accurate to the millimeter)

The unique way of connection, makes the structure strongest and the most stable shutter

Experienced painters adopt energy-saving coating processes, endowing shutters an exquisite glossy appearance; both inner and outer surfaces have silky skin-like touch
